Project Description & Scope

The main purpose of the database to be developed within the scope of the project is to digitize and systematically manage the business processes carried out in the Operations and Production Department of Dene Technology.

Dene Technology is a company operating in the field of embedded systems. Within the scope of this project, information about the personnel working in the department, customer data, and details regarding the product, payment, and invoicing processes carried out with these customers will be stored in the database.

As part of the production activities, some parts are supplied from external suppliers, while others are manufactured using the company's own production machines. Therefore, the system will also include information about suppliers, as well as records related to the quality control of the parts produced by the machines.

In addition, some products are manufactured within the framework of joint production or collaboration projects carried out with other companies. In such cases, the system will track which companies are involved in the production process, the source of the manufactured parts (supplier or in-house production), and the stages of the production process.

As a result, with the development of this database, all operational processes — from production to supply, from quality control to financial transactions — will be monitored and managed in an integrated structure. At the end of the project, a simple web interface integrated with this database will be designed, allowing users to easily access the system and conveniently manage the data.

In-project

- Tracking of registered products for production
- Tracking of machines used in the production process
- Recording of quality control data
- Registering suppliers and purchased parts
- Recording delivered products to customers
- Basic financial records such as invoices and payments
- Storing basic employee information

Out-project

- Real-time machine data and IoT integrations
- Detailed stock management and ERP functions
- Human resources management processes

- Production scheduling and operational optimization

Customer Information
Customer: Dene Technology
Address: Metro34 Plaza, Başak, Kat 5 No 56, 34480 Başakşehir/İstanbul
Contact person: Ömer Faruk Arslan
E-mail: faruk@sixfab.com
Field of activity: Software development, web applications, IT solutions

Sayın Yetkili,

Dersiniz kapsamında verilen veritabanı projesi ödevi için üç öğrenciniz bizimle iletişime geçmiştir. Şirketimiz ve oluşturacakları veritabanı hakkında öğrencilerle yapılan çevrim içi toplantı sonucunda, projelerini gerçekleştirebilmeleri için gerekli bilgiler ve yönlendirmeler kendilerine sağlanmıştır.

Bu kapsamda, öğrencilerin bizimle iletişim hâlinde olduklarını ve ödev kapsamında Dene Teknolojileri şirketini kullanmaları için izin verildiğini bilgilerinize sunarız.

Teşekkür eder, iyi çalışmalar dilerim.
Saygılarımla

Dene Teknoloji A.Ş.
